Rasterm is a greek acronym meaning “target”, and is in fact used to refer to the software utility’s tasks. Using it, the developer manages the serial communications, the data stream and all the other points linked to GRM modems. Besides, the software will perform data transfers from specific ports, thus allowing you to either use a file explorer, or upload/download files to/from a website. The latter can be done by directly running a browser or any other web client. The same can be done if you want to send and receive E-mails and text messages, and all you need to do is to make use of the

utility's integrated email client. In terms of settings, you can either choose a fixed COM port or port scanning. In the latter case, the software will check for available modems, and when the search reveals one, it will select that as well. Besides, rasterm also offers a few standard configurations as well as custom settings. In the latter case, the developer will be able to enter the entire PC configuration, whereupon a variety of items such as settings, programs, and so forth, will be managed. While the developers made sure that the software is capable of running on Windows 10, the utility has been tested on Windows 8 as well. In the evaluation copy you can expect a couple of tutorials, but the good thing about the software is that it can run on computers that are powered by Windows 7 and Windows Vista. There is thus a lot to look forward to, as it comes with an intuitive user interface that helps the developer to get everything done. While it is, of course, a little rough around the edges, it is a competent piece of software, and by no means could be considered a trial. In addition to being versatile, the cable is quite cheap to buy, which makes it a convenient item to have. Not surprisingly, it comes in various different colours as well. In order to make it more interesting, the cable that is available online offers an all new design, which also comes with a brand new name, the ASUS USB-C to USB 3.1 Gen 2 Premium. After buying the cable, you should make
