A: You can do this using reflection Type type = GetType(); MethodInfo methodInfo = type.GetMethod("foo"); bool foo = methodInfo.Name == "foo"; Reflection is never a recommended approach, but it is a possibility in your case. A: A simple solution is to do something like this: public int foo(int a, string b) { if (a == 1 && b == "foo") { return 1; } else if (a == 2 && b == "bar") { return 2; } else { return 0; } } Of course, if you had more complex logic, it would be better to actually have two different methods.
