This is a handy and reliable software that provides you with a simple way of managing cheques and creating various cheque templates. Using the application you can automatically write and print cheques and maintain multiple bank accounts. Also, you have the possibility to create multiple cheques into multiple currencies. What's new in this version: New updated system installer -- Please read the readme.txt file before installing to find out more. I have downloaded the trial version of QuikCheque in hopes of finding some quick cheque software that I can easily use in my business. First let me say that I have been trying to find something like this for a long time. I have even used Quicken and Quicken Pro, both were a piece of crap compared to this application. I downloaded the trial version of QuickCheque and must say I like it. It has a lot of the features that I have found missing in other software. There is an overall balance of features and ease of use. As I start to use it, I am going to list what I like and dislike about it. 1) There is no warranty, no receipt of any sort. 2) There is no backup feature. 3) It is a bit pricey for what it is. 4) I am unable to cut checks. 5) As soon as I try to look at another cheque from another account, QuickCheque crashes. 6) I was not able to find an option to make one signature as default for all accounts. 7) I have not yet found any way of printing a check without using a paper check and envelope. 8) If I use it with a laser printer, it prints all the cheques too big. 9) When I close the program, all my accounts are listed with no folder or group structure. 10) The application is too slow to be usable. Now for the things I don't like about it. 1) No customer support. 2) The account header is way too wide for my screen. 3) The application is not intuitive to use. 4) It has no help file. 5) There is no way of printing a receipt. 6) I don't know what is going on and how I can do what I want to do. 7) There is no way to export
