IBM® Drivers Update Utility for Windows® provides the fastest, most reliable way to identify and update your PC's out-of-date drivers and update them to the latest drivers. The tool scans your computer for out-of-date drivers and provides the ability to download and install the latest and most-recent drivers for your computer. With a scan, the tool will identify outdated device drivers, and download and install the latest-available drivers from the manufacturer's Web site or Windows Update. It is recommended to first run the scan before installing any new hardware on your computer. IBM Drivers Update Utility's intuitive interface makes it easy to scan for out-of-date drivers. With a simple click, you can run the scan and select where to download the drivers, along with other settings such as resume scanning and restarting the computer after installing new drivers. IBM Drivers Update Utility for Windows Vista/XP/7/8/8.1 There are no direct download links, but you can download the trial version from the website below: The only slight downside of this software is that it will search for all current drivers, which may not be the desired functionality. This tool does provide step by step instructions on how to set it up to search for specific drivers (eg. Network drivers).Q: Time Parsing in C# (.net) My goal is to parse an external source (Eg: Time.txt) to use as a reference. I want to check the hour, minutes and seconds for a valid time range. Ex. Check if the hour matches the range. Example 1: Source time (Suppose this time should be valid): 2019-01-01 08:00:00 Valid time range: 08:00 - 08:59 Ex. Check if the time matches the valid range Output: Success. Ex. Check if the time does not match the valid range Output: Success. Ex. Check if the time is outside the valid range Output: Failure. I have found a method of determining if a string represents a valid time: (I have written a simple formatter and parser to test if the time can be
