Open Autocad and you will see a pop-up window asking you to download and install the 'Advanced User License Key'. Click on this and wait for the activation to complete. Further help Read these Autodesk help pages for more help: Autocad help: Autodesk Content Pack help: Autodesk Certified User: Q: Interactive Figure with TikZ I've recently started learning TikZ and I'm stuck on a project. I want to make an interactive figure where if you click on a specific part of the figure, it'll zoom in, or if you click on a specific part of the figure, it'll zoom out. In other words, it's an interactive figure that you can zoom into or zoom out of. I've had a look online, but the examples seem to be way more complicated than what I want. I don't need it to be super accurate. I also don't need it to be a real world interactive figure, I just need it to be an interactive one that you can zoom in and out of. Thanks. A: I have created a TikZ code snippet for this, that should be very fast to animate and zoom.

```
\documentclass[12pt]{article} \usepackage{tikz} \usetikzlibrary{intersections} \begin{document} \begin{tikzpicture} \foreach \i/\color[step=0.2] \j/\mypoint[step=0.2] in { {1/black}, {2/blue}, {3/orange}, {4/gray}, {5/lightgray}, {6/green
```

View as PDF on a browser or smart phone. Ease of use is still a top priority for Autodesk. Acronyms in the Clipboard: LONG: Select all text in a drawing or model that you wish to copy and paste into the Clipboard. CARD: Paste the contents of the Clipboard back into a drawing or model. SHORT: Paste a single piece of text into a drawing or model from the Clipboard. (video: 1:07 min.) Whiteboards: 2D and 3D Whiteboards have a new look with color, gradients, and shadows that match the shapes and colors of your drawing. With advanced features, such as layers and shapes, a modeler can add more detail to a drawing or even to a whiteboard. A whiteboard layer can be easily hidden, so you can switch between the view of a whiteboard and the view of your drawing without having to restart your session. (video: 1:37 min.) A new theme that allows you to customize the look of your Whiteboard. (video: 1:09 min.) Search for selected text using the new “Find and Replace” feature. Macro recording: MACRO RULES: One or multiple Macros can be assigned to a drawing or model to quickly make your work more efficient. UNDO: If you made a mistake in a drawing or model, undo the last Macros that you created to undo the change. Updated features: The Display Settings dialog box has new features for quickly setting up your display. Choose to automatically configure your display with the correct resolution, manage video playback, and switch to High Performance Mode. Tee Off: The new Tee Off feature enables users to make changes in a 2D drawing in another drawing, a model, or even a 3D rendering. Tee Off is ideal for drawing complex piping diagrams. (video: 1:36 min.) Customizable Tool Palettes: Save your favorite palette and access it from within a drawing or model. Configure the Tool Palettes to display toolbars for more options. Choose from predefined layouts or create your own custom Tool Palettes. (video: 1:25 min.) CAD Manager: New and improved CAD Manager enables users to work more efficiently.
