Mind your image's _original intent_ and make sure that you are editing your images for _original impact_. Don't use Photoshop just to pull out a few details or create a special effect. Remember that anything that you change to a graphic or photo is going to be a change. Be sure that you are only retouching an image for _original impact._ Photoshop has a modular design that enables you to choose and use only the tools that you need. Each tool has its own set of presets that users can use as the starting point for their editing. You can also store your own custom presets, enabling you to customize your tools with your own unique "look." Presets are available for most Photoshop features and for the brushes and filters that ship with Photoshop. This chapter is your step-by-step guide to using Photoshop to create your own custom brushes, filters, and text effects. This is not a guide to learning _how_ to use Photoshop; that's a lifelong learning experience. The focus here is on how to use Photoshop to create your own brushes, filters, and text effects. When you're ready, Photoshop includes a small library of downloadable brushes, filters, and filters that you can use to create your own, just as you can create any other brush, filter, or filter effect in this book. You can also create your own custom Photoshop brushes, brushes, and filters by following the instructions here. Photoshop is a powerful tool for creating imagery and illustration, but to show you how to use Photoshop to create your own brushes, filters, and text effects, you need a basic foundation in using Photoshop. All images you work on have a specific document type, and it is important to choose the correct type. If you aren't sure which type you need, start with an SVG image. The SVG file format is becoming more widely supported by browsers, and for the time being it is a good default format for web graphics and static files. It includes the same formatting as vector file formats like EPS, but does not produce the raster images that JPEG images do. * **The New Document** Choose File⇒New, and select Adobe Photoshop CS4 Extended, shown in Figure 14-1. Click OK. FIGURE 14-1: In the New dialog box, you choose the type of file you want to create in Photoshop. * **The New Layer** In a new document, you can create a new layer

High power density harvesting is one of the goals in the development of power generation systems used for light duty transportation applications including electric automobiles, hybrid electric automobiles, etc. Flywheel energy storage systems have the potential to meet these needs. Generally, these systems are located in a compressed fluid and serve as a rotational energy storage device with a high power density. Flywheel energy storage systems operate in two fundamental modes: preload and unload. In preload mode, high energy is stored as angular momentum in a rotating flywheel. The energy is released as unload torque to an electric load when the load is disconnected from the output of the flywheel. This can be achieved by using various electrical disconnect strategies, including soft-switching, hard-switching, or control schemes. A hybrid electric vehicle (HEV) can be modeled as a DC machine (as a motor/generator) and inverter (as a DC-DC-AC converter) connected in series to a battery. The series system is a current source. The DC machine operates as a synchronous DC motor or as a brushless, flux-controlled DC motor. The inverter in the series system converts DC power from the battery and the DC machine to AC power that drives the AC traction motor. Current that is either positive or negative on a given half-cycle of the sinusoidal waveform results in torque that is positive or negative. It is challenging to maximize the power stored in the flywheel of a flywheel energy storage system. It is desirable to operate the flywheel at a relatively high angular speed during the preload mode and a relatively low angular speed during the unload mode to achieve the maximum power. However, the angular speed of the flywheel during the preload mode should be maintained at a reasonable frequency, to avoid "over-energy" the flywheel, which is a safety hazard. Also, the battery is recharged in the preload mode, and thus high angular frequency of the flywheel during the preload mode may result in excessive battery charging. In a conventional configuration, the ratio of the angular speed of the flywheel to the angular frequency of the inverter in the series system is limited in a preload condition. An initial motor (DC or BLF) current is set to a particular current ratio (i.e., "initial current") to control the angular frequency of the flywheel. As a result, the flywheel is operated at a relatively low angular frequency (to

The Great Change is a film directed by Nick Nolte that follows the life of Kim Lane Scheppele, an artist and former member of the Chicago art scene that took on a life-changing spiritual experience that changed her life forever. Premiered at the Sundance Film Festival, The Great Change is the first full-length documentary about Kim Lane Scheppele, and follows her life, from her childhood days on Chicago's South Side, to her passion as a mixed-media artist to a career as a motivational speaker in schools, corporations and spiritual retreats for women. This is the film. Lifetime I totally fell in love with this film. It is so inspiring. She definitely did not have the easiest path, but she showed us that no matter how difficult life can be, there is always a light at the end of the tunnel, and we need to keep our eyes on it. It was refreshing to see a film about a non-regular person, who had a unique passion and way of making a career out of it. I really wanted to see how she approached her career and school decisions, the ideas of connecting with the opposite sex and deciding when to pursue something. It was an empowering film and I feel it really opened my eyes to a new perspective on life. She is a really nice person to watch, even if you do not care for her style, she is someone you can admire for her character. This film will open your eyes to the beauty of change. Change is such an important concept in life and how we navigate the world around us. There is constant change in the world,

even the most serene areas, big changes such as war. And then there is the most frightening feeling in the world, change in yourself. That is the feeling of evolution. And that is what this film touches on.
