## Msproject2013fortorrent !FULL!

Is there any best project management software like msproject? Actually i used Msproject for last 2 years but i don't like it anymore. In msproject, the project management (PM) group use to display the list of the project task in two column. But it disturbs the whole look of the display and it's not easy to handle. I want a project management software which is simple, easy, better, powerfull, clear, and come with the interface which is similar to the msproject. Kindly help to get the best solution for me and my company. Thanks in advance. A: I think you are not the only person that is not satisfied with MS Project... I would recommend you to try Microsoft Project Planner Planning Heros These three will completely change the way you work. A bit of a challenge will be to switch from your current habit to these new tools but a couple of hours of training will take care of it. I haven't tried, but some of these tools may be perfect for those work and some for home use. Also, try and see if your current colleagues know about it. Its good to know that your colleagues will be your allies.
