1. Field of the Invention This invention relates to a variable volume fuel supply device or injection device, for injecting fuel into the intake air of a combustion engine, and in particular, to an injector, through which fuel is injected into the intake air, which is partitioned by an auxiliary partition to form two or more passageways with different opening cross sections. A bypass device that includes a bypass control valve discharges the combustion chamber of a combustion engine, via a bypass line, in a closed or an open state, in order to switch between the normal injection mode and the injection interruption mode.

2. Description of Related Art In known fuel injection systems, there are a plurality of individual injection valves that are arranged, for example, on a plurality of branches of a common fuel rail, and through which injectors the fuel is injected into the respective branches. In this context, an injector is understood to mean a device through which the fuel or fuel metering or injection is controlled. It can be actuated, for example, electrically, mechanically or pneumatically, as well as also hydraulically. EP 0 938 701 B1 discloses a fuel injection system in which the fuel is injected in two different modes of operation. There, the two different modes of operation represent a partial injection of the fuel into the engine cylinder at a high injection pressure in order to achieve a homogenization of the air-fuel mixture during engine operation, and a normal injection in which the fuel injection into the engine cylinder is controlled by the dosing system at a lower injection pressure in order to achieve a fine-structure-controlled air-fuel mixture. By switching between these two modes of operation, the operation of the engine, and in particular, the engine emissions can be optimized. By virtue of the operating range of the injection valve and the resulting pressure differential, the fuel is normally injected at a greater injection pressure into the engine than the pressure of the intake air. For this reason, a pressure is always present on the working side of the injection valve. This pressure is essentially constant over the injection process; however, it has an influence on the injector. The influence of the pressure on the working side is generally considered as a possible cause of excess pressure on the injector side in order

Sri Lanka's confident victories over West Indies in the T20 series and next week's ODI series will mean Australia's Test series, on which the Tigers are yet to make a significant mark, is likely to be a one-sided affair. AB de Villiers will lead the side in the first Test. News.com.au understands the selection panel felt some

player's innings would provide the match-winning momentum. The selectors have also included fast-bowling allrounder Shaun Marsh in the squad, despite his fitness concerns. The lack of support players - and the unavailability of specific positions - means the side has to be prepared to field at least two spinners, and fast bowlers. Players of the kind aren't as valuable to an Australian team as they are to sides like the Windies, where the batting line-up is more than strong enough for a powerplay. While there is no doubt the combination of

quicks and spinners is likely to be a winning combination for the Tigers, the selectors will need to be pragmatic with their selection, as there is a risk of losing players to specific selections. With Marsh in the squad, the Tigers' seam trio has to include two reliable fast bowlers, which may mean a preferred Test bowler is left out for a short-format series. It's a similar situation to this year, when the T20 series went to the spinners, and the first Test saw Daniel Hughes and Chadd Sayers not used.

Q: When to use the subjunctive mood? Does anyone

know how to use the subjunctive mood? I can easily remember the different forms of the declarative (present) and imperative (first and second) moods, but not the subjunctive. I can for example remember that in the indicative mood, the word "to be" doesn't change its ending from the first to the second person singular, but in the subjunctive mood, in the first person singular the "to be" is "essere", 1cdb36666d
